Full Stack Next JS + Supabase

Posted last week   📍 Worldwide

📢 Specialized profiles can help you better highlight your expertise when submitting proposals to jobs like these. Create a specialized profile.

Summary
Overview
Build a bilingual (Arabic/English) job matching platform connecting employers with professionals. You'll own the full stack, from UI design to database implementation.

Tech Stack
Next.js, TypeScript, Tailwind CSS, Shadcn, Supabase (PostgreSQL, Auth, Realtime, Storage), Vercel, Git

Required Skills
Strong TypeScript and Next.js proficiency
Supabase experience (database, auth, realtime, storage)
Modular architecture and service layer patterns
OAuth flows and session management
Responsive UI development with Tailwind CSS and Shadcn
Git version control and branch-based workflows
Ability to design UI from brand theme (no design handoff)

Responsibilities
Build frontend and backend features per module specifications
Implement matching algorithm, real-time messaging, and notification integrations
Handle file uploads, signed URLs, and document management
Design UI components based on provided theme colors
Follow module architecture defined in technical specifications

Delivery Structure
Project delivered in milestones, one module at a time. Detailed SRS provided for each module before development begins.

Additional Notes
Two modules within project are already implemented. You will review and refine these before starting new module development.
Shortlisted candidates will complete a video interview before final selection.
